1. INTRODUCTION

Ultra Cross Converter is the most cost-effective solution for broadcast TV channel branding, that combines high-impact graphic design with 2D/3D DVEs picture in picture of your program output, delivering SD/HD themed channel.

It is used to compress live TV Channel into a 2D/3D PIP and add graphics in news 24 style.

Ultra Cross Converter is the key tool to catch audience and characterize your TV channel, fully integrated with Axel automations and layouts, delivering and managing all tv branding aspects.

As an advanced character generator system, **Ultra Cross Converter** provides tickers, crawls, tables, logos, animations, clocks, news alert and commercial bugs insertion with squeezeback DVE on a live input.

All graphic elements can be inserted on three different layers: on the background, inside the PiP (following 2D/3D zoom & compress FX), and on top of them for channel branding. Ultra Cross Converter allows you to have a

LIVE approach or **SCHEDULED** approach for **Graphics Airing**.

FEATURES

- Advanced cost-effective branding solution
- SD/HD input & output
- Real 2D/3D DVE PIP on a live input
- Real-time data insertion from RSS, .txt, .xlsx etc..
- Graphic insertion of logos, animations, crawls, tables, tickers, slideshows, etc..
- User friendly broadcast & template editor interface
- 15 quick easy recall DVE presets & graphic templates
- Free internal scheduler
- Integration with automation systems
- Programmable GPIs for external controls.

2. CHANNELS PLAYOUT

Ultra Cross Converter is a powerful tool that allows you to manage graphics (crawls, ticker, rolls, clocks, tables, text, etc.) not only inside the PIP (Picture in Picture) layer, but at the same time to manage them in the surrounding area.

Ultra Cross Converter is a multilayer manager for your graphics. Every layer is composed by different pages that you can air or edit when you prefer.

- The First layer (**FOREGROUND**) is directly connected with your TV Station. You can use it to manage the look of your channel (in example the channel logo). This layer is the first one visible.
- The second layer (**PIP DVE**) is the clip layer. All items are directly overlaid on the Clip that you are playing.
- The third layer (**BACKGROUND**) surrounds the PIP DVE layer with different informations (items: in example with crawls, rolls, clocks, stock table, forecast). This layer allows you to have the desired PIP DVE and items positioning.

Remember: resizing the Squeezeback item in the Background layer you will resize all the items of the PIP DVE layer too.

Every layer has 4 default presets that you can change and customize. The original default layers will be available every time you install Ultra Cross Converter.

For every layer you have other 95 empty pages that you can easily customize.

At the top left of the MAIN AREA you can choose a **Multichannel** perspective, overlooking all layers at the same time, or paying attention to a single one: to the **Channel** (Foreground), to the **PIP DVE**, or to the **Background** layers.

2.1 MAIN – LIVE APPROACH

With a live approach you can have the perspective of all layers (Multichannel View) or you can concentrate yourself on a specific one (Single Channel View).

Every layer has different PAGES (presets) that you can recall just with one click.

2.1.1 MULTICHANNEL VIEW

The Multichannel tab allows you to air or to preview the single page of every layer.

2.1.1.1 PREVIEW AREA

From the *Preview Display* you can view the last page previewed in Channel 1, or PIP DVE, or BACKGROUND. Every new previewed page excludes the previous one.

2.1.1.2 CHANNEL 1

From this section you can air or preview the desired Foreground page.

In this example we have chosen the page 1 for the **PROGRAM** and for the **PREVIEW**, but the two button lines are independent from each other.

- **PROGRAM PAGE** buttons easily allow you to air the desired page on the **PROGRAM**.

1, 2, 3, 4 buttons are reserved to the default ones.

5, 6, 7, 8, 9, 10 buttons are reserved to the related customizable pages.

You can decide which page between pages 11-99 you want to associate with the Button **X**.

B button is a Blank Page.

- **PREVIEW PAGE** buttons easily allow you to see the desired page on the **PREVIEW**.

1, 2, 3, 4 buttons are reserved to the default ones.

5, 6, 7, 8, 9, 10 buttons are reserved to the related customizable pages.

You can decide which page between pages 11-99 (if available) you want to associate with the Button **X**.

B button is a Blank Page.

- The **left display** shows the **OUTPUT PROGRAM**.

In this example you can see the output with the default FOREGROUND page (1)

2.1.1.3 PIP DVE

From this section you can air or preview the desired PIP DVE page.

In this example we have chosen the 1 page for the PROGRAM and for the PREVIEW, but the two button lines are independent from each other.

- **PROGRAM PAGE** buttons easily allow you to air the desired page on the **PROGRAM**.
 - 1, 2, 3, 4** buttons are reserved to the default ones.
 - 5, 6, 7, 8, 9, 10** buttons are reserved to the related customizable pages (If the pages are available).
 - You can decide which page between pages 11-99 you want to associate with the Button **X**.
 - B** button is a Blank Page.
- **PREVIEW PAGE** buttons easily allow you to see the desired page on the **PREVIEW**.
 - 1, 2, 3, 4** buttons are reserved to the default ones.
 - 5, 6, 7, 8, 9, 10** buttons are reserved to the related customizable pages (If the pages are available).
 - You can decide which page between pages 11-99 (if available) you want to associate with the Button **X**.
 - B** button is a Blank Page.
- The **left display** shows the OUTPUT PROGRAM.

In the previously picture and in the following ones you can see that we have changed the original default preset, page1:

In:

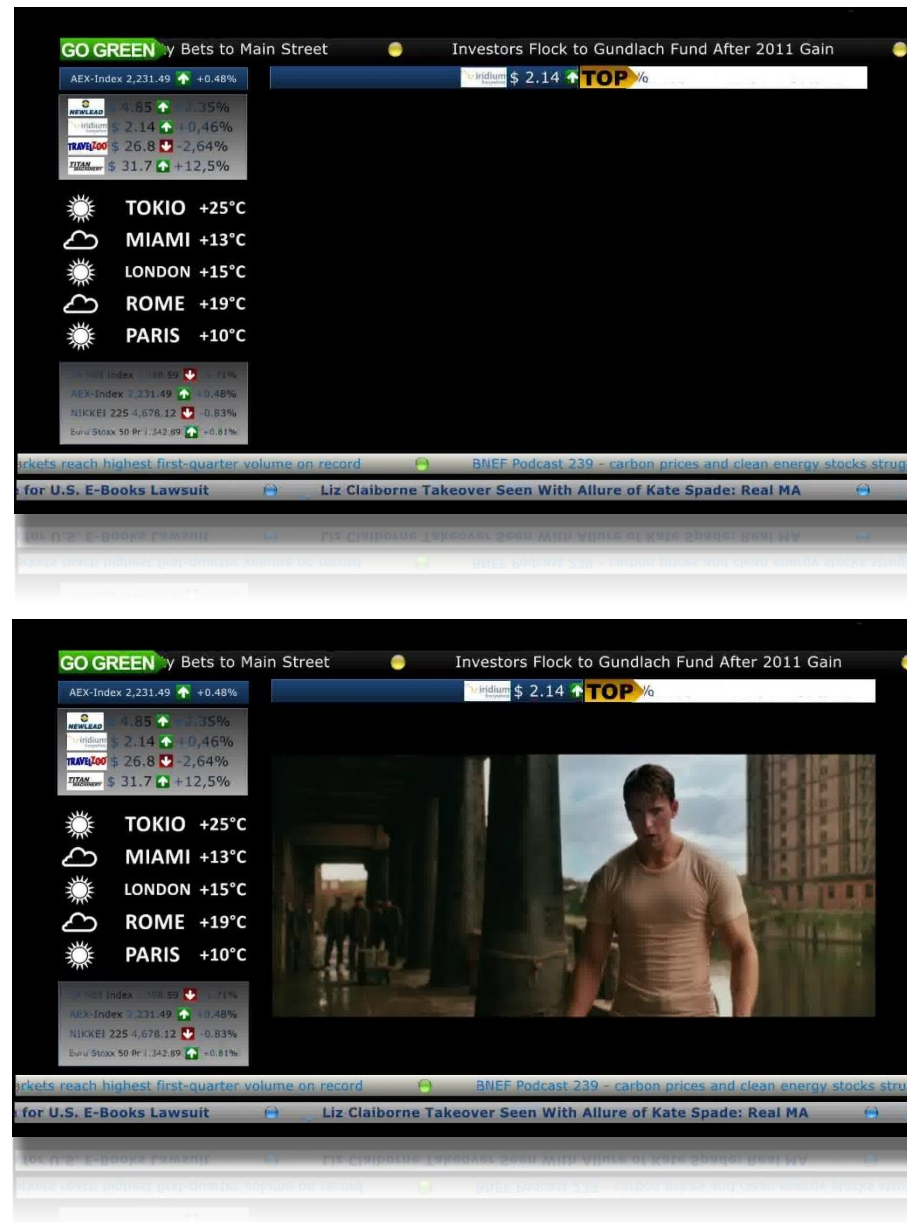

2.1.1.4 BACKGROUND

From this section you can air or preview the desired Background page. In this example we have chosen the page 2 for the PROGRAM and the page 3 for the **PREVIEW**, but the two button lines are independent from each other.

- **PROGRAM PAGE** buttons easily allow you to air the desired page on the **PROGRAM**.
 - 1, 2, 3, 4 buttons are reserved to the default ones.
 - 5, 6, 7, 8, 9, 10 buttons are reserved to the related customizable pages (If the pages are available. In this case you can see we have created two new pages the 5th and the 6th from the [PAGES - (PAGE EDITOR (COMPOSER) section]).
 - You can decide which page between pages 11-99 you want to associate with the Button X.
 - B button is a Blank Page.
- **PREVIEW PAGE** buttons easily allow you to see the desired page on the **PREVIEW**.
 - 1, 2, 3, 4 buttons are reserved to the default ones.
 - 5, 6, 7, 8, 9, 10 buttons are reserved to the related customizable pages (If the pages are available).
 - You can decide which page between pages 11-99 (if available) you want to associate with the Button X.
 - B button is a Blank Page.
- The **left display** shows the OUTPUT PROGRAM.

In this example you can see the output with the default BACKGROUND, page 2

In this example we have chosen to preview the page 3 (default page) in the **PREVIEW AREA**:

2.1.1.5 POSSIBLE LAYER COMPOSITIONS

From the Multichannel Tab you can make all the possible layer compositions that you need.

CHANNEL 1: PAGE1

PIP DVE: PAGE1

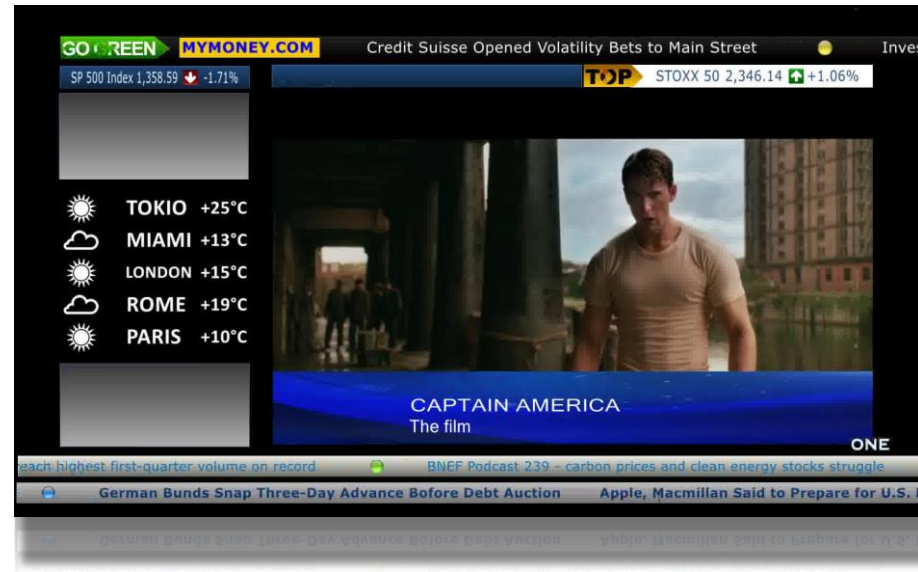

BACKGROUND: PAGE2

CHANNEL 1: PAGE2

PIP DVE: PAGE1

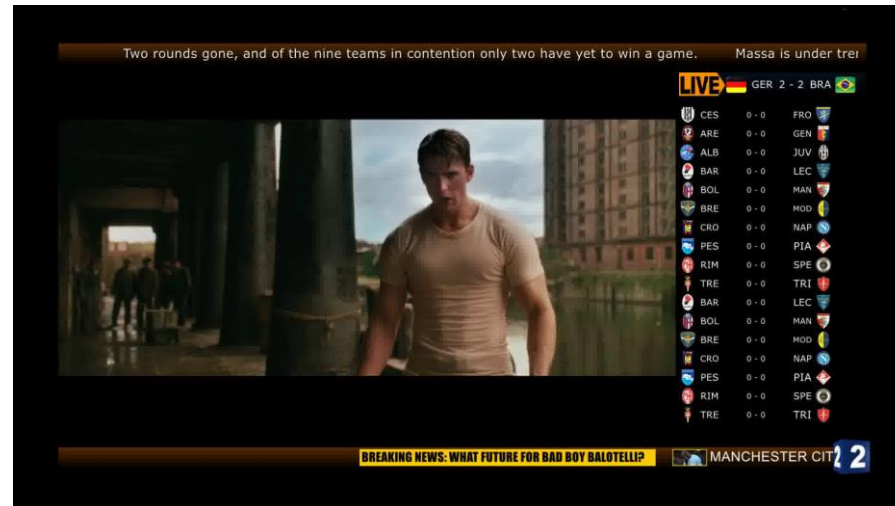

BACKGROUND: PAGE2

CHANNEL 1: PAGE1

PIP DVE: BLANK

BACKGROUND: PAGE4

CHANNEL 1: PAGE2

PIP DVE: PAGE2

BACKGROUND: B (BLANK PAGE)

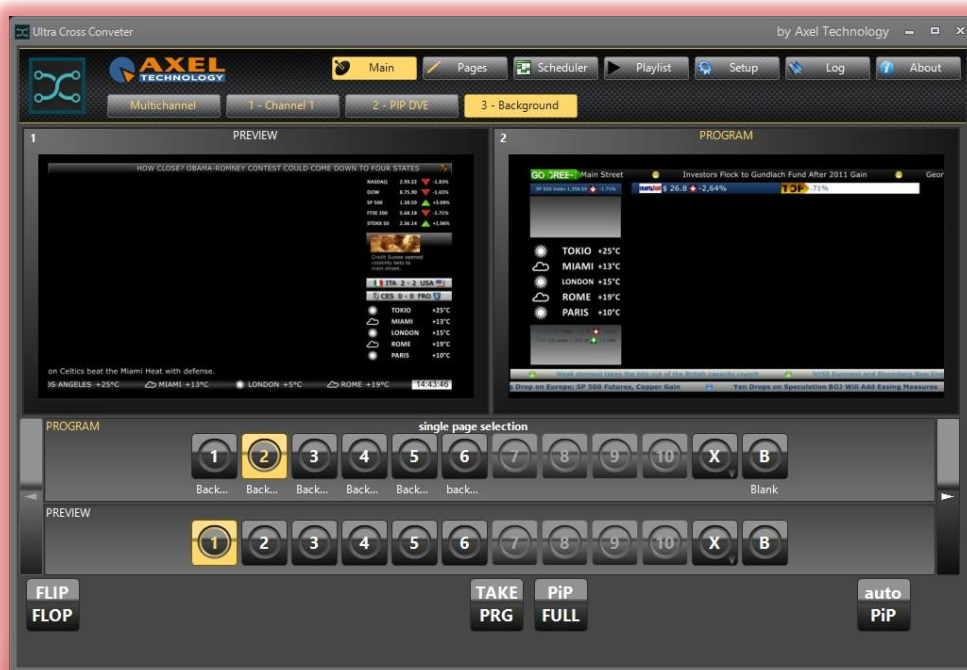

CHANNEL 1: PAGE4

PIP DVE: B (BLANK PAGE)

BACKGROUND: B (BLANK PAGE)

2.1.2 SINGLE LAYER VIEW

In addition to the MULTICHANNEL View, the Playout menu offers a view for each channel (excluding Preview channel).

Each channel shows the visualization of what is going on the air in the Preview channel and also in the selected channel.

This view, compared to the Multichannel one, allows to read the page description of the selected channel and to see the page preview in mouse over. In this way it is easier to remember what page is on the air.

By clicking one of the available pages it is possible to broadcast it. If you have edited one of the pages between 7, 8, 9 and 10 you can activate it here. By clicking on X it is possible to associate one of the pages from 11 to 99. B is the Blank page and is always usable.

TAKE PRG Take Program allows you to send the *Preview Page* to the Program

FLIP FLOP If **Flip Flop** is activated, by clicking **Take Program** you will automatically exchange the *Preview Page* with the *Program Page*

PiP FULL From every channel, by clicking **PiP Full** you will send the *Blank Background Page* to the Program. In this way you will have the PiP in full screen mode.

auto PiP If **Auto PiP** is activated, the transition between two *Background Program Pages* will be the PiP in a temporary full screen mode.

3. PAGES – (PAGE EDITOR/COMPOSER)

The Composer page is used to create or edit output's pages for each channel. It is possible also to see the changes made to the temporary page with the buttons "TAKE PRV" (on the Preview channel) and to air the page with "TAKE PRG" (on the current channel).

- 1 Choose and select the channel Channel1(Foreground), PIP-DVE, Background.
- 2 Select the page you want to modify (From 1 to 4 default. From 5 to 99 customizable).
- 3 Insert a "Label" for the selected page.
- 4 You can add a key combination to recall the page from the keyboard when you are on the "main" section.
- 5 You can add a GPI device to select the page. Ultra Cross Converter accepts commands from MOXA boards and RS232 commands:

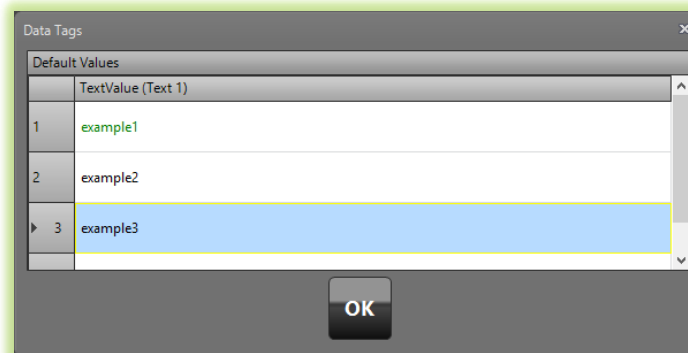

Any changes to the page can be undone using "UNDO", or saved by "SAVE". In addition, you can see real-time changes to the page without saving using the buttons "Take Preview" and "Take Program".

- 1 Removes all the objects from the page. A pop-up will appear to confirm the operation.
- 2 You can import a composition from other pages using a quick selection pop-up

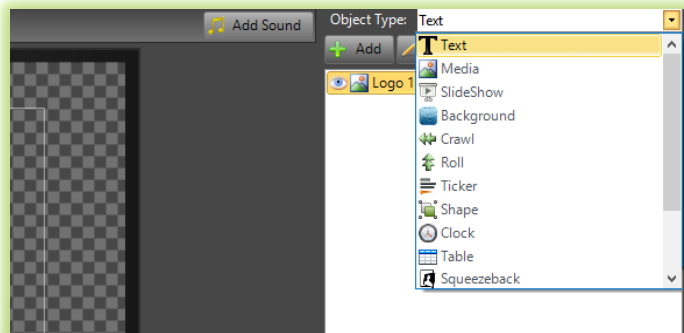

- 3 Imports Axel Cg File (*.acg), for example pages done and exported previously, or CG Composer pages.
- 4 This allows you to save the last page changes.
- 5 This allows you to export the project for a backup copy or to use it into another machine.
- 6 You can type different Text Values that you can fastly recall. Data Tags are allowed only for TEXT items.

- 7 Inserts *.mp3 file to your composition.

3.1 OBJECT TYPE

Objects you can import into the project.

SQUEEZEBACK- is the item reserved to the Input Source.

MEDIA– SLIDESHOW– SHAPE:

The supported image file types are: *.tga, *.swf, *.bmp, *.jpg, *.gif, *.png.

TEXT– CRAWL– ROLL– TICKER:

The supported text file types are: *.txt, *.xls, *.xlsx

TABLE- The only supported table file types are *.xls and *.xlsx

CLOCK– Does not support any external file

3.1.1 OBJECT BASIC PARAMETERS

3.1.1.1 SQUEEZEBACK

The Squeezeback is the **Ultra Cross Converter** most important object.

It allows you to have the PIP (Picture in Picture) with your Video Input in the desired place of the screen, in example a music clip, a movie or advertising.

Resizing or moving the Squeezeback you will resize or move all the pages and objects of the PIP DVE layer.

Set here durations of entrance and exit effects.

ATTENTION: This OBJECT works only in the PIP DVE Channel.

3.1.1.2 TEXT

Type the text into the box or browse to get data from file.

If you have selected FILE, the button  directly opens the file with the default windows application

The supported file types are *.txt *.xlsx.

It is also possible to broadcast social network messages through the Axel Technology **Social Hub** software. In this way you can broadcast RSS from web and Html links, email, posts from Social Networks (Instagram, Line, Skype, Weather, Facebook, Twitter, Flickr), SMS messages, Whatsapp messages and texts from any web page.

Font: Set font properties for the text

Align: Set properties for text alignment

Scale: Set properties for text scale

3.1.1.3 MEDIA

Browse to find an image or an animation to insert in the composition.

Set properties for the opacity on screen.

Play Mode - this function is useful when you need an animation on different pictures, usually if you want an animated Logo.

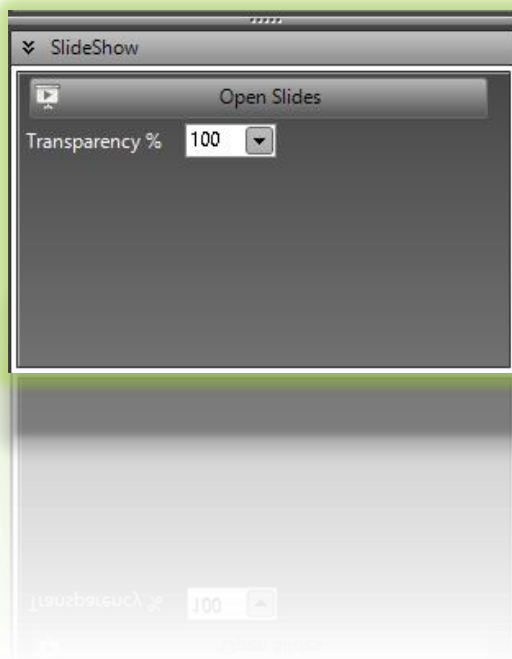

If you call all pictures in the same folder with the same name as TWO_0000.png, TWO_0001.png, TWO_0002.png, TWO_0003.pgn and so on, all the pictures will be played fastly. You have to name files with progressive numbers. Select **From File**, and select your first image to have the animation on customized pictures.

Loop: The animation will be played in a Loop Mode

Play Once: The animation will be played once, and it stops on the first picture of the sequence

Play Once And Hide: The animation will be played once and based on the Transitions Menu it disappears

3.1.1.4 SLIDESHOW

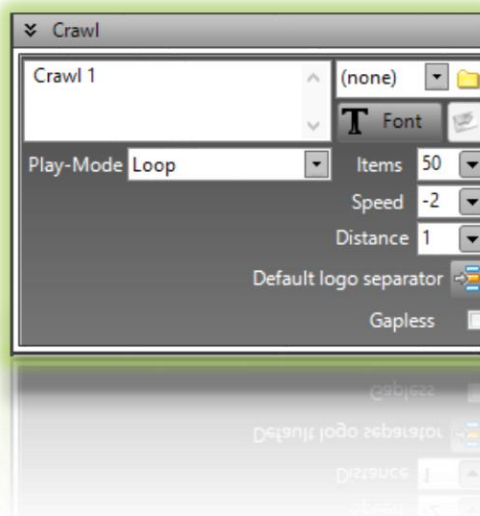

This object allows you to create a Slideshow of different pictures. Click **Open Slides**.

Then add or remove pictures to the list and set all desired parameters like Duration, Scale and Transitions.

3.1.1.5 CRAWL

Type the text into the box (none) or browse to get data from *.xls, *.xlsx, *.txt files (file).

If you have selected FILE, the button  directly opens the file with the default windows application. It is also possible to fill the crawl with the text of different *.txt files of the same folder (folder). You can broadcast social network messages through the Axel Technology **Social Hub** software. In this way you can broadcast RSS from web and Html links, email, posts from Social Networks (Instagram, Line, Skype, Weather, Facebook, Twitter, Flickr), SMS messages, Whatsapp messages and texts from any web page.

Font: Set font properties for the text

Play-Mode: decide the way to play the crawl displaying.

Sheet: only visible if you have selected a *.xlsx file, from this parameter you can choose the right sheet of the document.

Default logo separator: Choose the picture file that you want to use as the default logo separator.

Gapless: If you check this box there is no gap between a crawl and his repetition, or between a crawl and the next one

Item: Reserved to Social Network messages, this parameter declares the maximum message number to

store in the UCC memory.

Speed: speed and direction of the horizontal scrolling. Negative values move the text of the crawl from right to left, positive values move the text of the crawl from left to right.

Distance: Horizontal distance between two lines of the typed text or between two lines of the *.xlsx source file.

3.1.1.6 ROLL

Type the text into the box (none) or browse to get data from *.xls, *.xlsx, *.txt files (file).

If you have selected FILE, the button  directly opens the file with the default windows application

It is also possible to fill the crawl with the text of different *.txt files of the same folder (folder)

You can broadcast social network messages through the Axel Technology **Social Hub** software.

In this way you can broadcast RSS from web and Html links, email, posts from Social Networks(Instangram, Line, Skype, Weather, Facebook, Twitter, Flickr), SMS messages, Whatsapp messages and texts from any web page.

Font: Set font properties for the text

Play-Mode: decide the way to play the Roll displaying.

Sheet: only visible if you have selected an xlsx file, from this parameter you can choose the right sheet of the document.

Default logo separator: Choose the picture file that you want to use as the default logo separator.

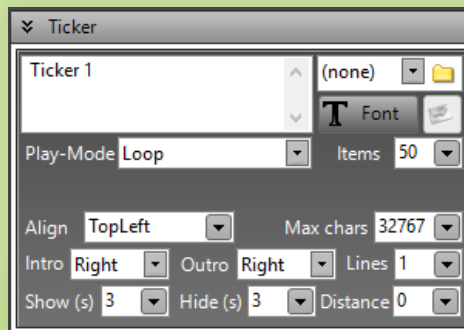

Gapless: If you check this box there is no gap between a Roll and his repetition, or between a Roll and the next one

Item: Reserved to Social Network messages, this parameter declares the maximum message number to store in the UCC memory.

Speed: speed and direction of the vertical scrolling. Negative values move the text of the roll from down to up, positive values move the text of the roll from up to down.

Distance: Horizontal distance between two lines of the typed text or between two lines of the xlsx source file.

3.1.1.7 TICKER

Type the text into the box or browse to get data from file.

The supported file types are: *.txt *.xlsx.

If you have selected FILE, the button  directly opens the file with the default windows application

It is also possible to fill the crawl with the text of different *.txt files of the same folder (FOLDER)

You can broadcast social network messages through the Axel Technology Social Hub software. In this way you can broadcast

RSS from web and Html links, email, posts from social networks (instagram, line, skype, weather, facebook, twitter, flickr), sms messages, whatsapp messages and texts from any web page

Set font properties for the text

Play-Mode: decide the way to play the crawl displaying.

Sheet: only visible if you have selected an xlsx file, from this parameter you can choose the right sheet of the document.

Items: Reserved to Social Network messages, this parameter declare the maximum message number to store in the UCC memory.

Align: Set properties for text alignments

Max Chars: Set the maximum characters to show of a single ticker line

Intro: Set the direction of the animation of the ticker entrance

Outro: Set the direction of the animation of the ticker exit

Lines: Number of ticker lines to show in the same time

Show (s): Number of seconds to show a line

Hide (s): Number of seconds between a line and the following one.

3.1.1.8 SHAPE

Type: Choose from a selection of shapes the desired one
Image, From File: if you want you can fill the shape with a desired image file. Check **From File** and click to browse the image.
Rotate: Set the desired shape rotation
Round Corners: decide here how much you want to round the shape corners
Gamma Correction: set here if you want to have or not the Gamma Correction.

3.1.1.9 CLOCK

Select from a wide range of options the way to show Date and Time on your screen.
 Select if you want to show the Time or if you want a Countdown or a Countup.
Font: Set properties for font style, font size and alignment.
Scale: Set properties for text scale
Start Time: Set the start time for the Countdown and Countup
Offset Time: Set Offset only for Time. You will see the Windows Time plus the Offset (remember you can choose a positive or a negative Offset value).

3.1.1.10 TABLE

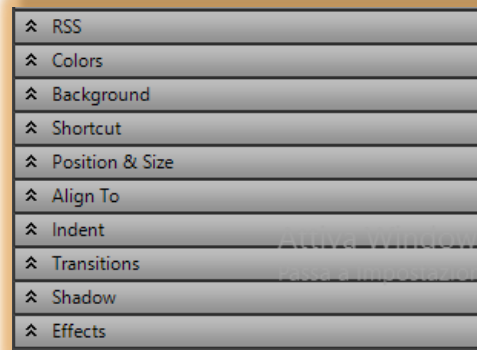

For the table object it is only possible to select a *.xls or *.xlsx **File** from Excel in example. It is possible to select a specific sheet of the file.

Set the right Font, the right Scale, and Items Effects to have interesting transitions for every single cell.

3.1.2 OTHER USEFUL OBJECT SETTINGS

After the object insertion and the selection into the page you can surf in the right menus to customize each object parameter.

Set the RSS options.

Set the foreground and background colors defining gradients, outlines, transparency for each element.

Assign here the shortcut for the selected item or a GPIO command. Useful only if you want to import the page in our CGLive software.

Set position and size (in pixel or percent) of the selected object.

You can maintain the aspect ratio by checking the related box.

“Restore..” will reset all the parameters to the default.

Anchor allows you to resize the object from specific corners or from the center.

Lock will unable position and size changes

Set the selected object in Full Screen Mode.

Align the object with few clicks into the screen in specific positions such as center or on the safe area guides.

Set specific boundary inside an object. Check our sample to understand how powerful is this feature to create stunning and broadcast graphics!

Catch your audience setting input and output transitions for any object.

Set options to customize shadows and give a good look to your project.

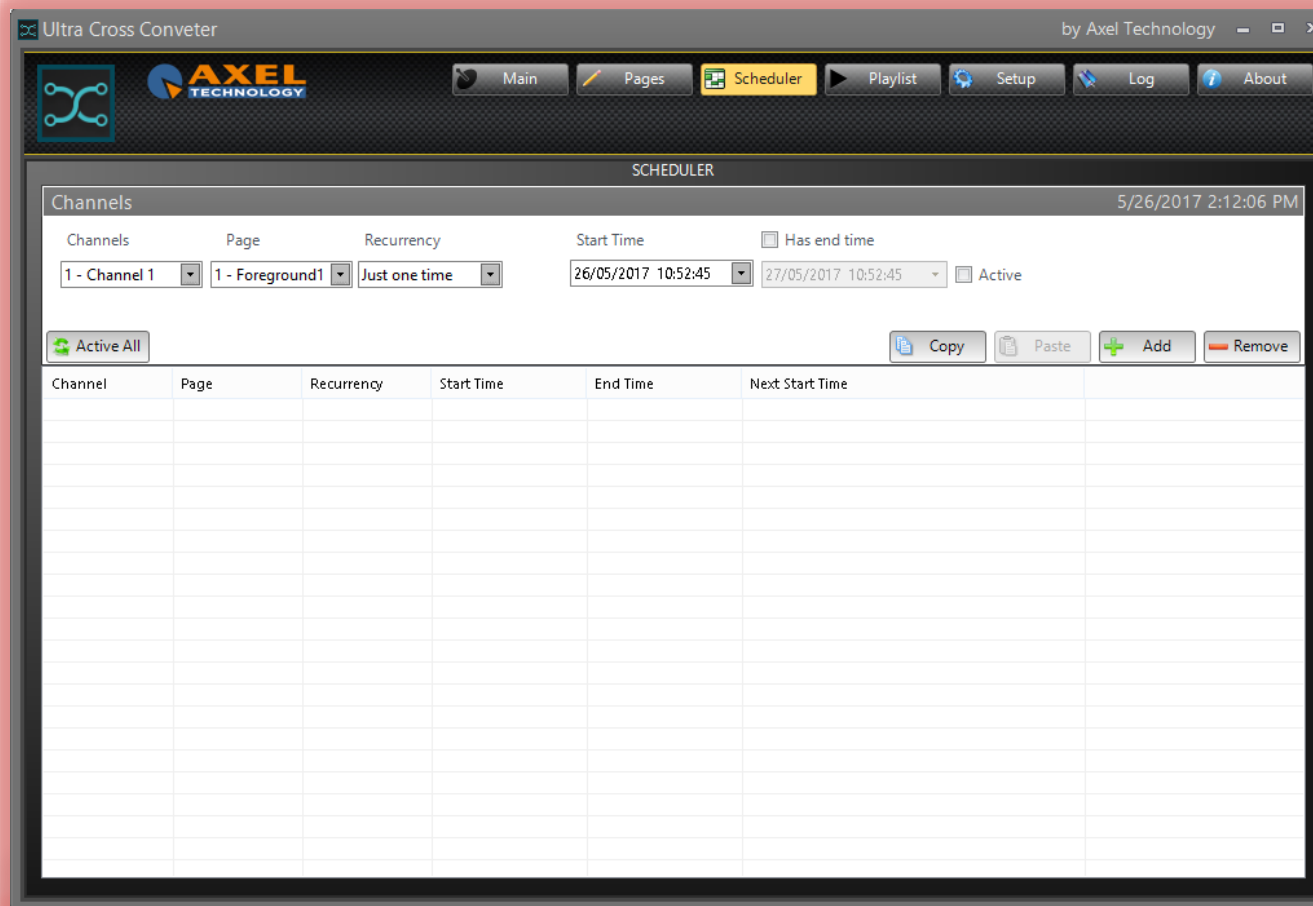

Give to your object Glow or Blur effects

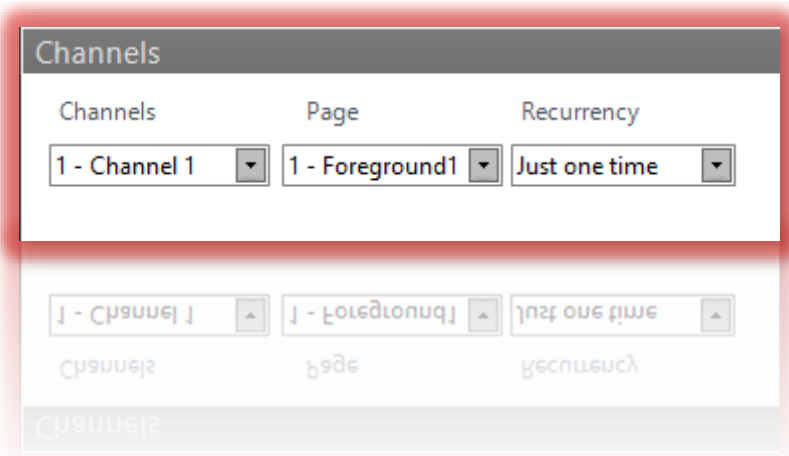

Store and manage your logos and animations for a quick recall.

4. SCHEDULER

The Scheduler section allows the user to set a specific schedule of all pages of all Channels. Each page can have a Start Time and if you want an End Time too. It is possible to choose the Recurrency of every page

Here you can select the Channel, the Page and the desired Recurrency to add the page to the scheduler.

Recurrency: With this parameter the selected page will be sent to the Program with a repetition. This repetition is ruled by the recurrency.

The first page recurrency will be at the *Start Time*:

Decide between:

- *Just one time* (Only in this case we suggest you to use the *Has end time* if desired)
- *Every n minutes*
- *Every n hours*
- *Every n days*
- *Every n weeks*
- *Every n months*

ATTENTION: If there is a conflict between two pages of the same Channel, the page with the more recent start time will win. This law is valid also in a conflict between the **Scheduler** and with the **Playlist**.

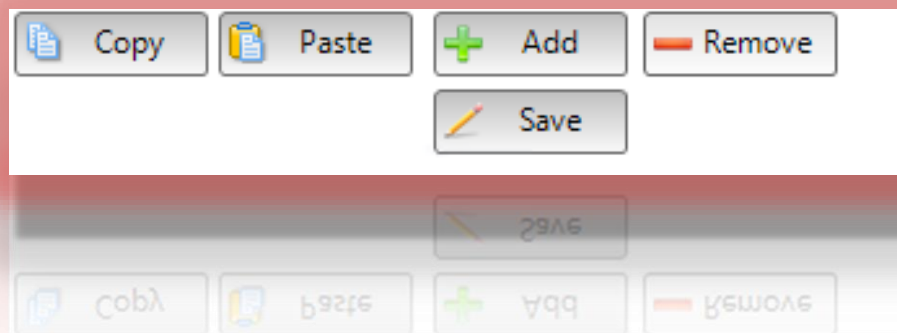

Check this box if you want to activate the page

Press this button if you want to activate all the pages

Select a page in the table and with the following buttons is possible to move, copy, past, add, remove, select, change and save it. (**Attention:** Only not active pages could be deleted)

5. PLAYLIST

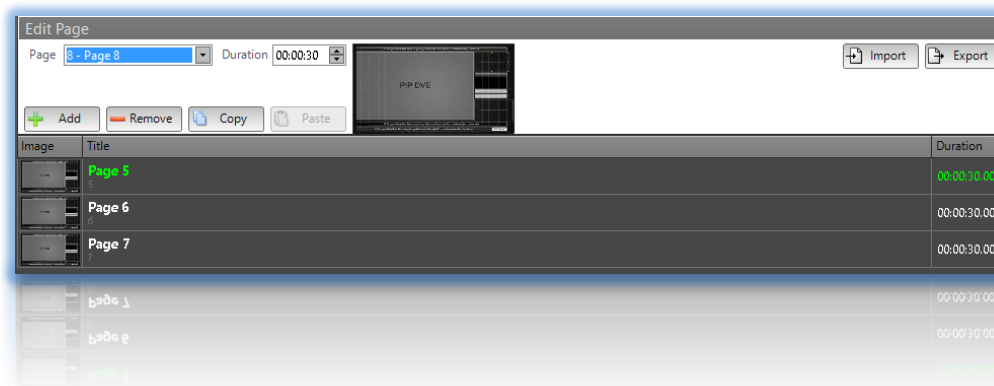

With different pages of the same channel (or layout) you can create a sequence **The Playlist**.

The **Playlist** is specific for a single Channel and you can reproduce it when you want.

*In example you can create a specific Playlist designed for the **Background***

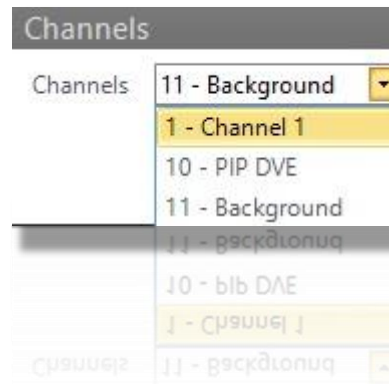

You could want a playlist composed by an automatic sequence of pages: pag4, page5 , page6. Page7...

If you want you can have an automatic startup of the playlist. Here you can set the desired date and time. Check the parameter if you want this option enabled.

Or if you prefer, press Play when you want to instantly broadcast the Playlist previously created. It is also possible to have a loop of the selected playlist after the Play pressure.

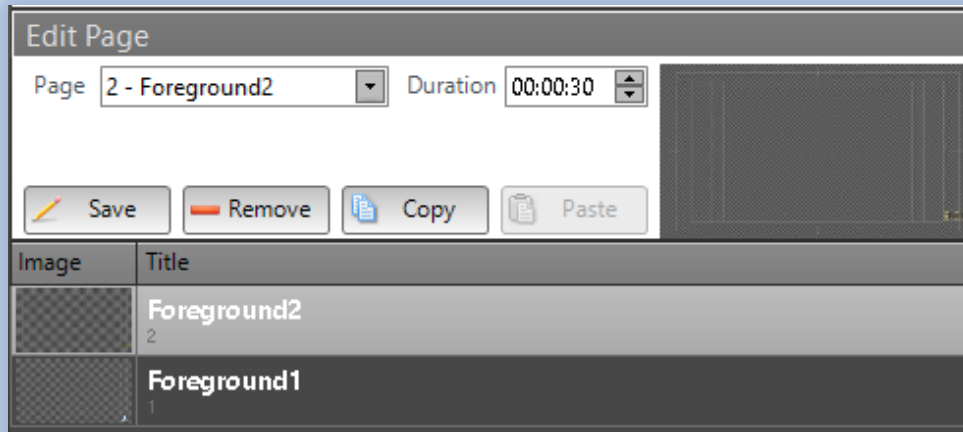

ATTENTION: The single Channel Playlist is independent from other Channels.
It is possible to reproduce different Playlists related with different Channels in the same time.

Here you can read infos about the OnAir page, the remaining time to the start of the next one and the name of the next page.

Select here the Channel Page that you want to add in the Playlist and its duration. In the right display you can see a Page Preview. Then click on **[Add]**

Here you can see that we have added two pages. You can see the pages in the bottom list.

Select the one you want to change and click on **[Save]**. It is possible to change the **Page** and the **Duration**.

Select the one you want to remove and click on **[Remove]**

Select the one you want to copy and click on **[Copy]**. Then click on **[Paste]**

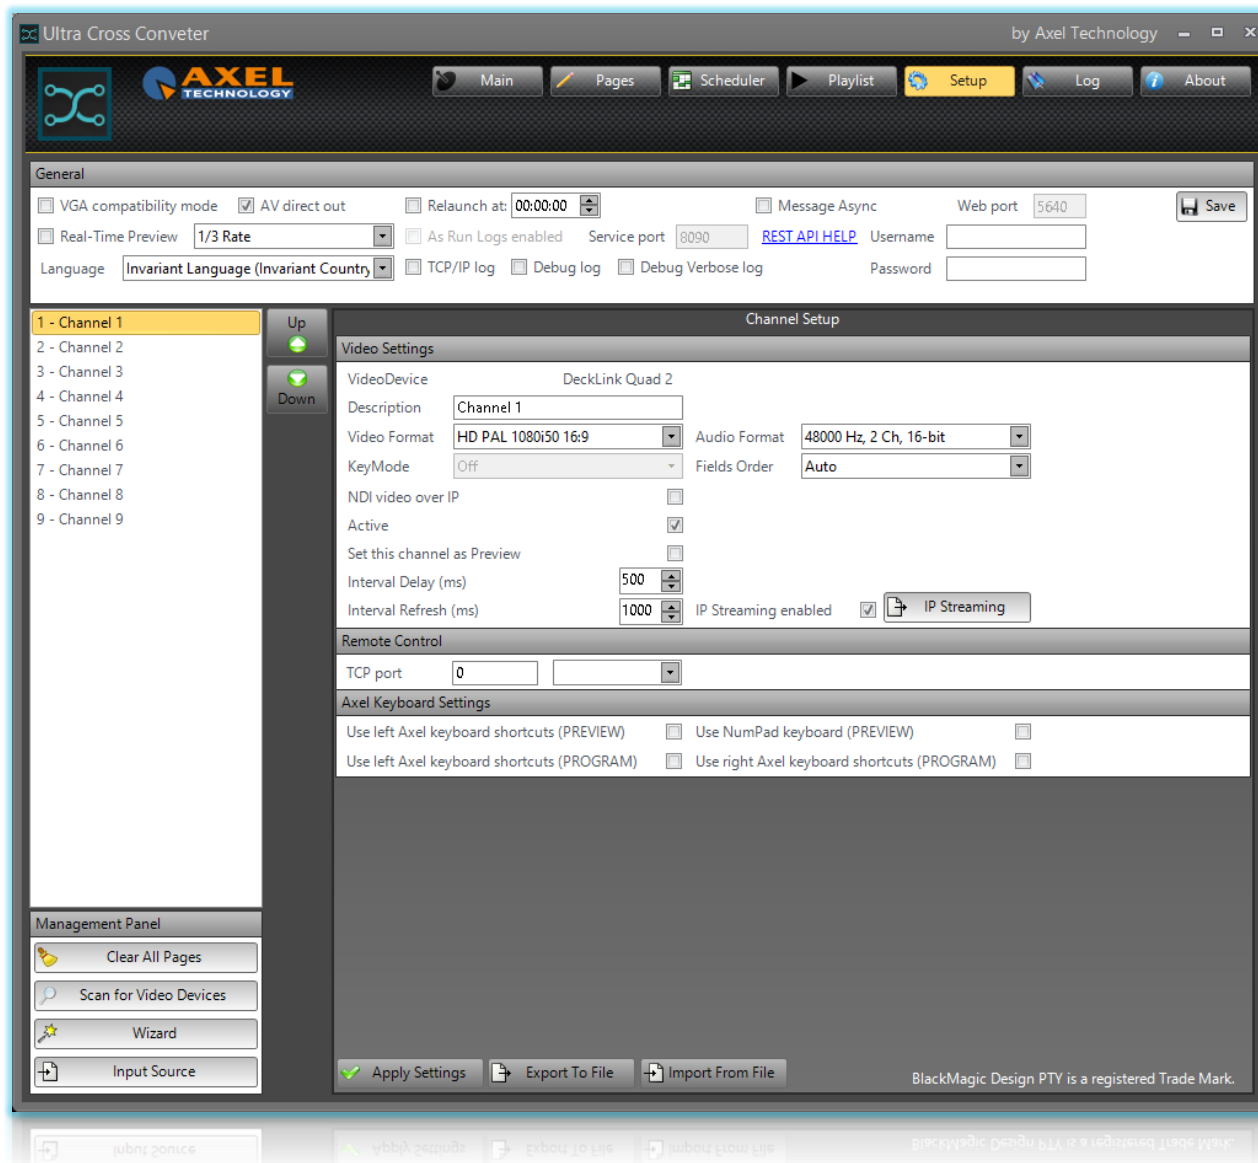

Import: allows you to import an existing *.xml playlist

Export: allows you to export the playlist in a *.xml file

These are the columns of the bottom list.

6. SETUP

In **General** mask:

<input type="checkbox"/> VGA compatibility mode	By checking this box you enable the DirectShow framework. This could be useful in example with Remote Desktop
<input type="checkbox"/> VGA compatibility mode	By unchecking this box you enable the Direct3D framework. This is more performant
<input checked="" type="checkbox"/> AV direct out	By checking this parameter you reduce the Buffer between UCC and the Video Card
<input type="checkbox"/> Relaunch at: 00:00:00	By checking this parameter you will relaunch UCC automatically at the selected time.
<input type="checkbox"/> Message Async	By checking this parameter, every UCC Error messages will not compromise the software functioning.
<input type="button" value="Save"/>	Save your general settings
<input type="checkbox"/> Real-Time Preview	The preview in every UCC previews area will be displayed at this VideoRate
Language	Select between available UCC languages
<input type="checkbox"/> TCP/IP log <input type="checkbox"/> Debug log <input type="checkbox"/> Debug Verbose log	TCP/IP log Debug log Debug Verbose log – Select which kind of logs you want to enable.

REST API HELP

By clicking on this link you will read all the possible REST API commands.

In this way you can control your UCC for every browsers of your network.

The Syntax of the REST API commands has to be **HTTP://LOCALHOST:8090/UCCSERVICES/MANAGER/REST/...**

Uri	Method	Description
/CheckCredentials	GET	Service at http://192.168.99.216:8090/UCCServices/Manager/REST/CheckCredentials

SetChannelWeb	POST	Service at http://192.168.99.216:8090/UCCServices/Manager/REST/SetChannelWeb

In the **Channel Setup** mask you have **Video Settings**, **Remote Control** settings (to use our **Social Hub** software in the UCC) and **Axel Keyboard Settings**.

This field shows you the current Video Device

Customizable Description of this Channel

You can see the Video Format and it is also possible to select another one.

You can see the Audio Format and it is possible to select another one

Select here the Fields Order (Auto, First Field, Second Field, Progressive)

With Ultra Cross Converter you can also generate an NDI streaming. It could be seen and used allover your own Network.

Decide if you want to Active or Deactive this channel.

 Active

Decide if you want to set this Channel as Preview or not

 Set this channel as Preview

With this parameter you can set the time of the transition of the page (page entrance and page exit)

 500

As you know, It is possible to use an external source file in a page item. This parameter allows you to set the Time to automatically refresh the external source files.

 1000

By checking this parameter you can enable the **UCC** Video Streaming.

By pressing the **IP STREAMING** button you can set the streaming parameters.

 IP Streaming enabled

From **Ultra Cross Converter** you can stream video through the internet using different transport protocols and different tools (**RTMP, UDP, RTSP, IIS Live Smooth, RTMP (FMLE) - H. 264, RTMP (FMLE) - VP6, Windows Media**).

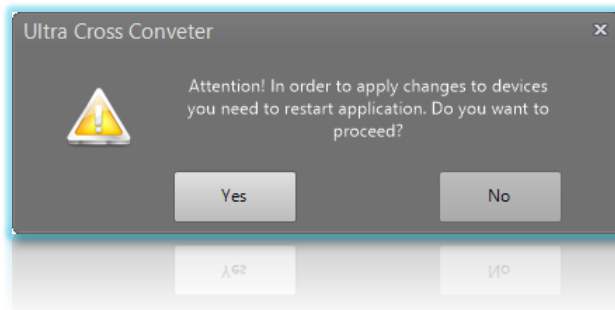

In the following example we have created an UDP Streaming at the following target **udp://239.0.0.9:1234**

By pressing this button you can scan for available Video Devices connected with your PC.

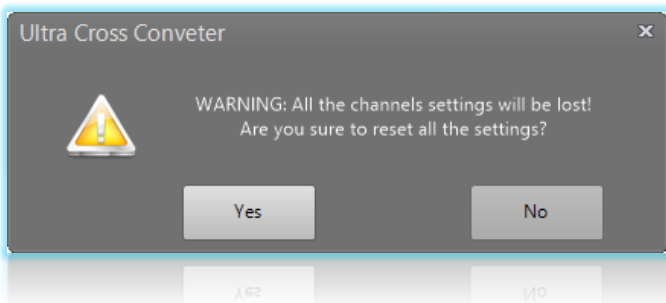

If you say **Yes**, the UCC automatically detects the Video Card. We suggest you to use a BlackMagic DeckLink. Then you have only to select the desired Output Video Format between the availables.

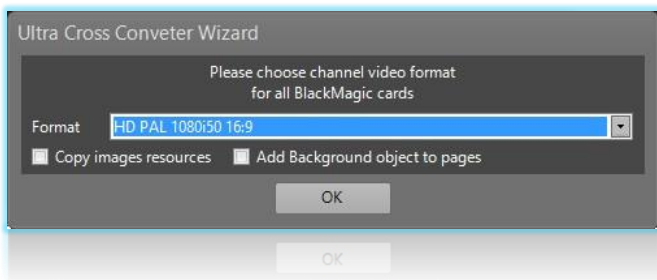

By pressing the **Wizard** button you will be guided in the Video Format configuration.

Click **Yes** to start the **Wizard**

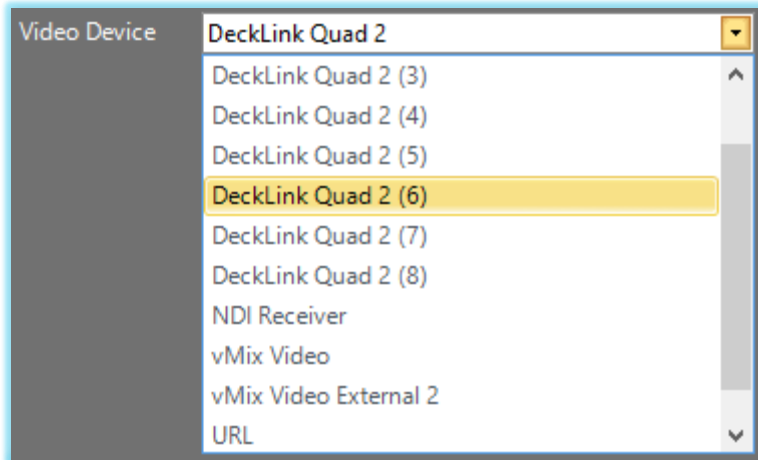

Select the desired Channel Video Format

Through this button you can set all details of the Video Input Source.

Here you can select an SDI source from a BlackMagic Video Device, an NDI (Network Device Interface) source in your network, or the source from the vMix software (virtual multisource mixer sdi and ndi).

Attention: Each Video device could have different Video Lines, in example you can have different NDI Streamings in your network. Select it in the **Video Line** parameter

Apply Channel Settings using the related button. From this sections you can also export or import a complete *.acgs file (graphic project).

7. LOG

In the **Log** section you can read for the **UCC** Logs. This section is organized in two tabs: **Log** and **As Run**.

In the **Log** tab you can read all the Logs connected with the **UCC**.

In the **As Run** tab you can find all the Logs connected with Channels, Devices, Pages, Objects.

8. FINAL CONSIDERATIONS AND AXEL TECHNOLOGY CONTACTS
